Mind the Basel Gap

Petri Jylhä and Matthijs Lof Aalto University School of Business

<u>petri.jylha@aalto.fi</u> matthijs.lof@aalto.fi

1. Background: Basel gap

Difference between a country's credit-to-GDP ratio and its estimated long-term trend.

Basel Gap = Credit-to-GDP ratio – Trend

Used for setting countercyclical regulatory capital buffers under **Basel III**.

<u>2. Contribution</u>

Empirical: Basel gap is nearly equivalent to naive **16quarter change** in credit-to-GDP ratio.

Analytical: one-sided Hodrick-Prescott (HP) filter applied to **I(1) process** generates mechanic relation between trend and lag.

<u>3. One-sided HP filter</u>

Drehman et al. (2010): trend estimated by applying HP filter (λ =400,000) to Credit-to-GDP ratio **recursively** and connect the endpoints:

Illustration: UK data (1973-2018)

4. Basel gap and 16-quarter change

The **Basel gap** (deviation from trend) is highly correlated with naive **16-quarter change in the Credit-to-GDP ratio:**

Correlationof90%between UK Basel gap and16-quarterchangechangeinCredit-to-GDP ratio.Both measures identify thesamecredit cycles (peaks

The **recursively estimated one-sided trend** is visibly lagging the **Credit-to-GDP ratio**.

5. Analytical results

Correlation between deviation from trend and k-quarter difference maximized at k=16.

Left: UK data (1973-2018).

Right: analytical solution relying on Cornea-Madeira (2017), assuming underlying I(1) process (random walk or random walk with time-varying volatility).

Correlation breaks down when underlying process is I(2).

6. International evidence

Correlation between Basel gap and naive change for 15 countries (44 countries in paper).

ADF test p-values demonstrate I(1) property of Credit-to-GDP ratio.

| | | | | | ADF tests | |
|----------------|-----|----|--------|---------|-----------|--------|
| | n | k | cor(k) | cor(16) | Level | Change |
| Austria | 231 | 17 | 0.94 | 0.94 | 0.51 | 0.00 |
| Australia | 233 | 16 | 0.89 | 0.89 | 0.92 | 0.00 |
| Canada | 251 | 17 | 0.93 | 0.93 | 1.00 | 0.00 |
| Switzerland | 231 | 17 | 0.90 | 0.90 | 0.97 | 0.00 |
| Germany | 231 | 19 | 0.95 | 0.94 | 0.18 | 0.00 |
| Denmark | 207 | 17 | 0.96 | 0.96 | 0.69 | 0.10 |
| Finland | 191 | 17 | 0.93 | 0.93 | 0.91 | 0.00 |
| United Kingdom | 222 | 16 | 0.90 | 0.90 | 0.90 | 0.00 |
| Italy | 231 | 13 | 0.93 | 0.92 | 0.44 | 0.09 |
| Japan | 215 | 14 | 0.90 | 0.89 | 0.35 | 0.08 |
| Netherlands | 230 | 12 | 0.88 | 0.86 | 0.87 | 0.00 |
| Norway | 231 | 17 | 0.90 | 0.90 | 0.88 | 0.00 |
| Portugal | 231 | 15 | 0.95 | 0.95 | 0.49 | 0.01 |
| Sweden | 230 | 16 | 0.92 | 0.92 | 0.99 | 0.00 |
| United States | 266 | 18 | 0.96 | 0.95 | 0.60 | 0.01 |
| Median | | 17 | 0.93 | 0.92 | 0.87 | 0.00 |

7. Conclusion

The Basel gap relies on a seemingly sophisticated filtration method that is needlessly complicated and obscure. A naive change in the credit-to-GDP ratio identifies nearly identical credit cycles.
